

# Zero Trust Security

## Helping you protect, detect, and recover

Adopting Zero Trust security for your organisation is a business imperative. The workplace today extends to almost anywhere, anytime, from any device. Siloed, patchwork security solutions leave gaps that threat actors continue to exploit.

We work with leading security vendors to help you adopt a comprehensive Zero Trust model to provide the integrated security your organisation requires - reaching across your entire digital estate to continuously verify every transaction, assert least-privilege access, and provide real-time responses to threats.

### 921 Attacks

every second - In 2022, there were 921 attacks every second - a 74% increase in just one year - **Microsoft digital defence report 2022**

### 102 Minutes

is the median time for an attacker to begin moving laterally within your network once a device is compromised - **Microsoft digital defence report 2022**

### 89%

of web application breaches involved some sort of credential abuse (either use of stolen credentials or brute force) - **2021 Verizon Data Breach Report**

## What makes us great?

We have **strategic partnerships with tier 1 security vendors**, as well as being Cisco Advanced Security Architecture Specialised and Microsoft Security Solutions Partners

We **protect over 500,000 users**, showcasing our ability to secure diverse and expansive environments

We have over **20 years of proven experience**, which has earned us the trust of top global law, insurance, and finance firms, as well as the public sector

We have the experience and understanding to help you develop and execute a security strategy that automatically adapts to the complexity of your business, embraces the hybrid workplace, and protects your people, devices, apps, and data wherever they're located.

Working as an extension of your team, our security experts assess your current risk and recommend ways to improve your threat protection. We work with your teams to help design, implement, and support your environment and if required can offer managed security and 24/7 Security Operations for your organisation.

You need to have journey mates that understand what you need as a business. Reliability and trust are definitely crucial and that's what we are getting with Cisilion - **Tomaso Portunato, Co-founder Of Platform**

Following the principles of Zero Trust, we provide solutions that:

**Protect your users**

**Protect your endpoints**

**Protect your Apps & Data**

**Secure your network**

**Offer Security Orchestration, Automation and Response**

## Outcome & Benefits

### Protect your revenue & reputation

by continuously monitoring your environment against malicious actors and update policies automatically when risks are identified.

### Reduce cost by up 60%

through vendor consolidation and standardisation – reducing licensing costs, people costs, maintenance, and operational expenses.

### Protect everything

With a comprehensive portfolio of products and services that align to the Zero Trust framework.

### Cut through the noise

by simplifying management of security tools and consolidating multiple systems into a single pane of glass.

### Lower cyber insurance premiums

by detecting and removing gaps in your overall security posture, demonstrating to insurers that your security team have proactive strategies and systems in place.

## Our Clients

Microsoft Defender for Endpoint deployment  
Microsoft Defender for Office 365 deployment  
Deployment of AppLocker

**25** On-prem servers

**250** users

Microsoft Defender for Endpoint, Cloud Apps & Identity with Azure Conditional Access  
Deployment & configuration of Sentinel

**2500** users

Deployment of Cisco Umbrella  
Free 30 day trial resulted in capture of over 140k malicious requests on network

**33** networks

**14** locations

**1400** users

## About Cision

At Cision, we are proud to have a highly experienced cyber security team, who can not only advise on the tools, solutions, approach, and services needed to protect and secure your data, but also that can address real-life business challenges including secure remote work, mobility, compliance, information

governance, insider risk, and secure remote work. We work across the security stack with a focus on helping you achieve end-to-end and cost-effective security strategy rather than simply a mesh of different products and vendors with different dashboards and management portals.
